

DATA VIRTUALITY PIPES PROFESSIONAL

The Complete Data Pipeline Solution

Data Virtuality Pipes Professional is a comprehensive ETL solution to replicate your data in a highly customizable manner. The data can be easily manipulated with SQL to your specific need which gives you the flexibility and efficiency that businesses in this digital era desire - in cloud or on-premises.

HOW IT WORKS

WHAT YOU CAN DO WITH PIPES PROFESSIONAL

Integrate data from multiple data sources

Regardless of the data type, you can combine and centralize all your data in your target storage

Example: integration of marketing platform data and other product or user data

Leverage the full potential of your APIs

You can execute operations on specific APIs, such as automated tasks and jobs

Example: update and import of data in Salesforce based on the results from your integrated analysis

Transform the data

The data can be prepared and structured beforehand, so you can dive right into the analysis.

Example: enabling pre-calculated KPIs, data cleansing or data anonymization/pseudonymization

Model the data / Rapid BI Prototyping

You can quickly test your data sets thanks to the SQL data modeling layer

Example: adapt SQL queries to create and modify your data model

VOICE OF OUR CUSTOMER AMAYSIM

„We faced volume, variety and velocity challenges – Data Virtuality Pipes Professional lifted terabytes of data from an on premise legacy solution into the cloud, enabled near real-time change data capture from a heavy-load MySQL cluster and added business data from 10+ different SaaS systems and APIs. With the reports users now have the possibility to analyze near real-time data from different systems together.“

PIPES PROFESSIONAL FEATURES
